

VENUS LEGACY

The New Venus Legacy Overview

Venus Legacy™ is a single aesthetic workstation for Non-Surgical Body Contouring, Cellulite Reduction, Stretch Mark Improvement and Skin Tightening for the Face, Neck and Body. It is the first and only FDA cleared technology to use a combination of **Multi-Polar Radio Frequency** and **Pulsed Electro Magnetic Fields**.

Legacy offers two new treatment applicators for the Body and Face/Neck both utilizing the enhanced Venus 4D™ Technology combining RF+PEMF+VariPulse™+Real Time Thermal Feedback, which is designed to deliver safe, pain free treatments and superior outcomes. It is the only aesthetic technology to be offered by way of a low risk subscription business model.

Expanded Overview

4D Body Applicator

To stimulate fat and cellulite reduction, tighten lax skin and improve the appearance

of stretch marks, the 4D Body applicator is designed with a multi-dimensional RF & Pulsed Electro Magnetic Field (PEMF) energy matrix that operates at adjustable frequencies to target specific treatment areas from multiple directions and positions. This unique array of 12 electrodes combined with the largest spot size in the industry and the VariPulse™ feature, allows for the greatest depth of penetration in the industry, for improved results and enhanced patient comfort. Real time thermal feedback allows for optimum energy delivery and improved outcomes.

4D Face & Neck Applicator

The 4D Face & Neck applicator utilizes a multi-polar design to deliver RF & PEMF energies that has proven effective in generating new collagen and elastin fibers, while renewing blood supply to the treatment area. The unique placement of the electrodes allows for faster treatments while giving technicians easy access to hard to reach areas such as the eyes and neck. The addition of the new VariPulse™ feature allows for a more uniform delivery of the thermal energy while stimulating lymphatic drainage for improved results and enhanced patient comfort. Real time thermal feedback allows for optimum energy delivery and improved outcomes.

VARIPULSE™

The new 4D applicators both utilize the innovative VariPulse™ Technology, a unique adjustable pulsed suction feature that adds a new dimension to the treatment experience by allowing combined energies to be delivered into targeted tissue depths even more effectively while also stimulating lymphatic drainage. This new feature potentially allows for increased therapeutic temperatures to be achieved by enhancing patient comfort through gliding tissue stabilization.
